

Wall Tile Adhesive

Professional results now in
half the time

Spray-Lock® Adhesive Technology is providing a proven, professional way for you to experience faster tile installation, waste less time cleaning up and grout the same day. You get the same professional finish with less time on the job. That means faster job turnaround and more profit for you.

Spray-Lock® Adhesive Technology is setting a new standard within the industry. Install tile up to 50% faster when using Spray-Lock® adhesive. Once adhesive has tacked up, you have one hour of working time. Compared to trowel grade adhesive, this adhesive possesses immediate shear strength due to its Stable Bubble Technology. Once adhesive has tacked up, the material will be unable to move left or right. It will have “zero slip”, allowing for grouting after one hour.

Once tile is installed, you can grout the same day. Adhesive bleed through in grout lines is eliminated due to the thinner bed of Spray-Lock® adhesive.

	Spray-Lock® WTA	Traditional Adhesives
Grout same day	✓	✗

Approved wall products:

- Glass tile • Mosaics • Porcelain
- Ceramic tile • Marble • Granite • Stone

Approved substrates:

- Primed sheet rock • Hardiebacker®
- DensShield® • Plywood

Spray-Lock® Wall Tile Adhesive has been tested in the labs and in the field and has proven to be a successful alternative to mastics and thinsets for many wall installations.

“ I am very, very impressed by Spray-Lock® Wall Tile Adhesive. I think it has great advantages over mastic and thinset – the cleanliness, the lack of oozing between tiles. I would definitely say it’s faster and undoubtedly cleaner – there is none of the mess I’m used to when using mastic. I think for backsplashes, Spray-Lock® Wall Tile Adhesive will cut my time and aggravation in half. I would definitely recommend Spray-Lock® WTA over mastic.”

- Tile Contractor, Phoenix AZ

“ As a contractor, I do many kitchen tile projects. I am highly impressed by the many advantages of Spray-Lock® Wall Tile Adhesive compared to traditional trowel methods. The projects are easily cut in half using Spray-Lock® Wall Tile Adhesive.”

- Contractor, Dean Thomas

“ The speed of Spray-Lock® Wall Tile Adhesive is incredibly fast and I have the confidence that if I make a mistake, I can pull off the tile, spray it again, and reapply the tile. With thinset, you have an issue if you try to take a tile off: you have the old buildup to deal with and the adhesive is much less forgiving. Clean-up is less than half the time. The savings in time, easier cleanup and completing a job in one day make Spray-Lock® Wall Tile Adhesive a great option.”

- Remodeler, Bellingham WA

“ Using Spray-Lock® Wall Tile Adhesive, I was able to prepare, install and cleanup the kitchen and backsplash area within 24 hours. I was able to spray an entire wall and then tile within minutes. I would highly recommend this product.”

- Handyman, Mike Castleberg
